About us

浙江丽水拓展汽车部件有限公司于2008年开始运营，因为老板有一个进入国际汽配市场的梦想。最开始是一个小项目，公司做出了一款蜗牛喇叭，虽然这是一个小产品，但是它的工作量非常之大。随后公司开始研发各种款式的喇叭，到现在已经拥有了上百种款式。

起初工厂位于温州市瑞安市，随着规模的扩大现已搬迁到丽水市莲都区。占地面积5000平方米，每月生产数万套喇叭。多种产品和国内外知名汽车厂配套，并出口到东南亚，中东，俄罗斯，欧美等地区。

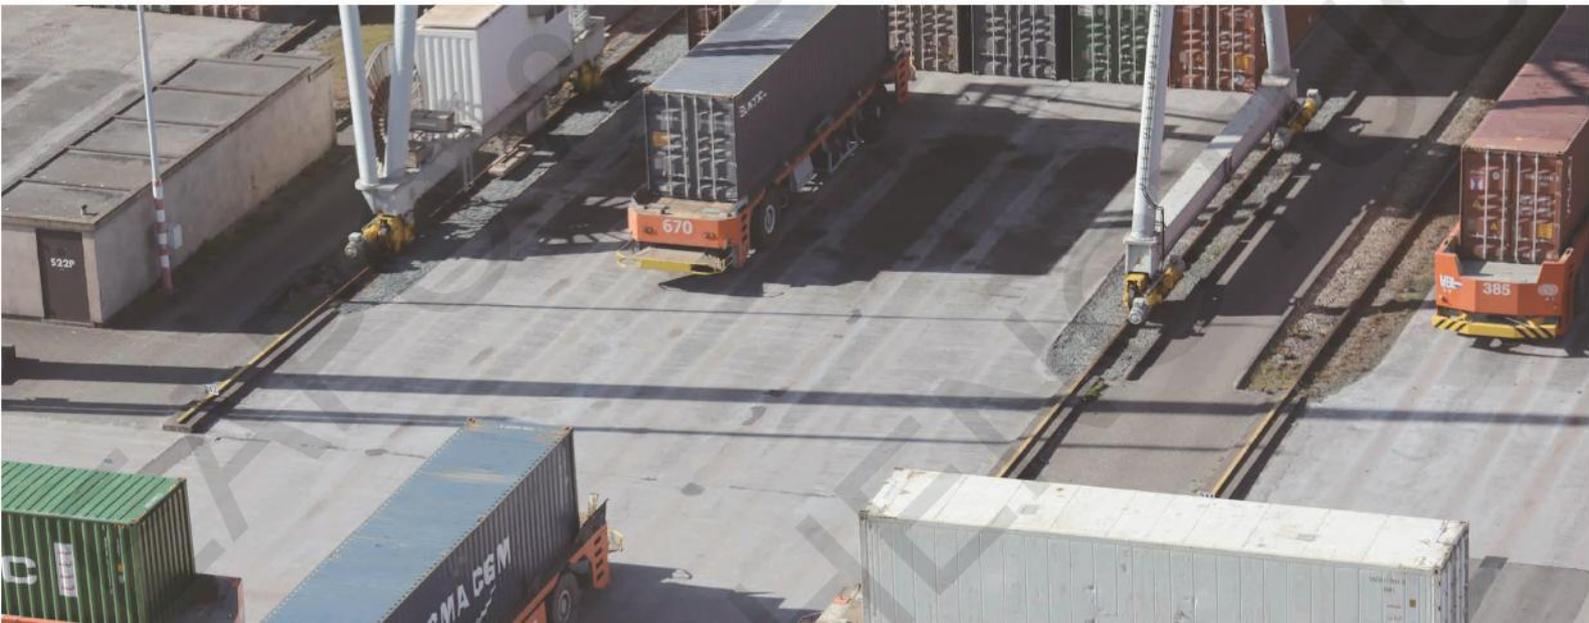

几年来在全体员工的努力下，我们不断地提高企业的经营水平和产品质量，为走向世界的中国汽车工业增添光彩！我们竭诚欢迎国内外客户光临指导，携手新世纪的东方

Zhejiang Lishui Expanding Automobile Parts Co., Ltd. started operations in 2008 because the boss has a dream of entering the international auto parts market.

Initially is a small project, the company made a snail horn, although it is a small product, but its workload is very large. Then the company began to develop various styles of horns, and now has hundreds of styles of horns.

The factory was initially located in Tangxia Town, Ruian City, Wenzhou City. It has moved to Liandu District of Lishui City with the expansion of its scale. It covers an area of 5,000 square meters and produces tens of thousands of horns per month. Since our product placing on the market, is praised by user, in which a variety of products and the well-known domestic and foreign car plant and supporting exports in Southeast Asia, the Middle East, Russia, Europe and the United States and other regions.

In recent years, the company in the joint efforts of all staff, to hard work, innovation, pragmatism and dedication of the entrepreneurial spirit, continually improve the level of our enterprise management and product quality. We whole heartedly welcome domestic and foreign merchants to negotiate. Let us join hands and create a new era.

SPECIALIZING IN THE PRODUCTION OF CAR HORNS

Patent and certificate

蜗牛喇叭

信号方式：脉冲气压

声音传输：扩散式的扇形发散传输到蜗牛喇叭出口处的两侧，呈扇形方式传输，生相和谐

使用优点：多用于警告靠近的驾车者，能让对方驾驶室者估计车辆的方向和距离。

生产材料：采用高质量材料，适应各种天气，有较强的抗撞击能力。

Snail horn

Signal mode: pulse pressure

Sound transmission: diffused fan-shaped divergence is transmitted to both sides of the snail's horn exit, and is transmitted in a fan-shaped manner.

Advantages of use: It is mostly used to warn motorists who are close to each other, and allows the other driver to estimate the direction and distance of the vehicle.

Production materials: high-quality materials, adapt to various weathers, and have strong impact resistance.

盆型喇叭

信号方式：金属撞击

声音传输：有方向性地沿直线传输，喇叭结构阻止了声响向旁边发散，而受控制的向前发出，声音强。

使用优点：声音响亮，具有很好的穿透性，多用于警告较远的驾车者。

生菜材料：采用高质量材料，适应各种天气，有较强的抗撞击能力。

Disc type horn

Single mode: Metal hit

Sound transmission:transmits along the straight line in the right way tropism,the structure of horn prevented the sound to diverge to side,but is controlled to send it out forward,volume is intensity of sound.

The merits of using:the sound is resounding,has the very good penetrability, mosfly used in warning the far driver.

Production material:It adopied the high grade material, the material adapts each kind of weather,and has the strong anti-hit ability.

气喇叭

信号方式：脉冲方式

声音传输：由前座、后座、响片、喇叭管和电磁阀组成，当气量增加时，响片振幅增大，声音的响度增强，能够传播的更远。

使用优点：适用于有气源装置的各种车辆，音质宏亮。

生产材料：采用高质量材料，适应各种天气，有较强的抗撞击能力。

Air horn

Signal mode: pulse air pressure

Sound transmission: It composed by the front seat, The back seat, The sound piccc, The horn and the solenoid valve. When air tolerance increasing, the swing of the soundrattles can spread further.

The merits of using: It is suitable for each kind of vehicles with air source devices, The acoustic fidelity is sonorous.

Production material: It adopted the high grade materials, adapts each kind of weather, and has the strong anti-hit ability.
