Flat woven webbing slings

Description

The webbing sling consists of a sewn webbing component, with or without fittings for attaching loads to the hook of a crane or other lifting machine, and it is intended for general purpose lifting operations, i.e. when used for lifting objects, materials or goods, but not including the lifting of persons, potentially dangerous materials such as molten metal and acids, glass sheets, fissile materials, nuclear reactors and where special conditions apply. The component webbing is made of polyamide, polyester or polypropylene industrial multifilament, and its width range goes 25mm to 450mm inclusive. All slings are colour coded, identifying the relevant working load limit, and are individually labelled stating sling number, material, length, date of manufacture and any relevant safety information. All load bearing seams are sewn with a contrasting colour of thread to the sling, to facilitate inspection procedures. Slings can be manufactured to any specified length with flat eyes, folded eyes or steel terminals to suit all applications.

Technical parameter

Material: 100% polyester (PES), high tenacity multifilament
100% polyamide (PA), high tenacity multifilament
100% polypropylene (PP), high tenacity multifilament
Performed standard: EN1492-1:2000, JB/T8521.1-2007, AS1353.1-1997
Safety factor: 7:1, 6:1, 8:1, 5:1
Length: Available from 1 to 100m or as required
Width: 25mm to 300mm inclusive
WLL: 0.05 to 48.00 ton inclusive
Webbing layer: from 1 to 4
Color: International standard

Eye&eye polyester webbing sling

Made from 100% high tenacity polyester (PES), to EN 1492-1, Shape type B1, B2, B3, B4, with polyester reinforced eyes, single, double, three and four-layer construction optional, with capacity label.

Features:

The soft eyes reinforced with polyester material.
High force to weight ratio.
Color code, in light of international standard to validate sling capacity.
Each stripe equals to 1 ton capacity, by which sling capacity is discerned easily.
Light and supple.
No damage to delicate and painted surfaces.
Resistant to twist or tie.
Polyester webbing sling is resistant to most mineral acids but damaged by alkalis (Polyamide webbing sling is virtually immune to the effect of alkalis but attacked by mineral acids. Polypropylene webbing sling is little affected by acids or alkalis and suitable for use where the highest resistance to chemicals other than solvents is required). Immune to complete water, oil and grease.
Handling easily.
Utilisations without gloves or other protections.
Low extension not more than 3% at rated capacity.
Work and storage temperature ranges is -40°C to 100°C (-40°F to 212°F), which is identical to that of webbing sling made from nylon but different from -40°C to 80°C (-40°F to 176°F) of the webbing sling made from polypropylene.
High resistance to abrasion.
No junctions inside.

Roundslings

Description

Roundsling consists of a load bearing core of yarn, completely enclosed in a woven cover, with or without fittings for attaching loads to the hook of a crane or other lifting machine, and it is intended for general purpose lifting operations, i.e. when used for lifting objects, materials or goods, but not including the lifting of persons, potentially dangerous materials such as molten metal and acids, glass sheets, fissile materials, nuclear reactors and where special conditions apply. The components of core and woven cover are made of polyamide, polyester or polypropylene industrial multifilament. It becomes a very cost effective lifting sling that is soft to touch and much less likely to cause damage the material being lifting, it will not cause the type of injuries to the user, compared to lifting with wire rope sling, say, cuts caused by broken wires, manual handling or impact injuries. Round lifting slings are compact and light weight than both wire rope or chain slings and as a result, they are much easier to handle. Fibre round slings are comparatively cheap compared to most alternative lifting slings and tend to be more flexible, lighter and money saving. On the negative side endless slings do have less abrasive resistance though this can be overcome by using a wear sleeve made from either polyester or from polyurethane. Other alternative method to provide sling protection would be to use steel end fitting such as Grade 80/100 master rings and sling hooks, or the use of corner protectors. All slings are colour coded, identifying the relevant working load limit, and are individually labelled stating sling number, material, length, date of manufacture and any relevant safety information.

Endless polyester roundsling

Made from 100% high tenacity polyester (PES), to EN1492-2, single and double-layer roundsling sleeves optional, attached with capacity label.

Features:

For its endless shape, the using life to be added by change of the load bearing point.

Handling easily and tight adhesion to the surface of load.

High force to weight ratio.

Color code, in light of international standard to validate sling capacity.

Each stripe equals to 1 ton capacity, by which sling capacity is discerned easily.

Light and supple.
