Wiper Blade

TO BE THE TOP-GRADE WIPER BLADE MAKER

Ningbo Zhenhai Jinjian autoparts factory is located at coastal city—Ningbo. The place which has beautiful natural scenery and is famous for many great men. Hangzhou Bay Bridge and Ningbo airport & deep-sea port provide good transportation condition for us and bring us into economic circle of Shanghai.

We are a manufacture which specialized in wiper blade, with the capacity of designing, R&D, producing and selling. Besides, we have professional staffs who mastered high technology of this industry. Also, advanced production equipments and rigorous quality checking instructions have ensured the high quality of our products. Our factory has complete range of specifications—— We supply all kinds of wiper blade include soft wiper blade, universal type wiper blade, special type wiper blade. Our products have exported to America, Europe, Southeast Asia and so on. We reward our customers with continuous improvement and the best products and we use our advanced technology and high quality to build long-term stable cooperation relationship with every customer. We are working hard to be the leader in the industry.

Quality is the touchstone of every product, this is also the core value we treasure. We take the quality as our life and we build strictly quality control and management system. We import advanced production equipment and technology to ensure the quality improvement.

Sincerity is a concept and is also an essence. 'Work by heart, serving by heart' is Jinjian people's spirit.

With the spirits: create with science, survive by the quality, we will supply high quality products and service base on the sincerity.

Wiper Blade

Professionalism

**EXCELLENT WIPING QUALITY
AT HIGH SPEEDS!**

Designed with high-carbon steel spring leaf, the pressure points are distributed on the wiper blades more lasting and more even. superior to ordinary products, this type of wiper blades has better scrubbing capability.

The job of the wiper blade is not to wipe water off the glass. What it does is to smooth the water on the surface of the glass in order to create a thin film that allows light to pass through it without refracting or bending.

The uniform spread of water on the glass allows light to pass through it without refracting. When the windshield has not been wiped, water droplets create an uneven surface causing light to refract as it passes through, affecting the driver's field of vision.

JJ-700-8
